K. SRIYUTH

AI-ENABLED SOFTWARE ENGINEER & CREATIVE DEVELOPER

MCA STUDENT (2025-2027) | 32 PUBLIC GITHUB REPOS | FULL-STACK & GENERATIVE AI

Hyderabad, India

PROFESSIONAL SUMMARY

PROFILE

Multidisciplinary Software Engineer and Creative Developer with demonstrated work across Generative AI systems, full-stack web applications, desktop developer tools, and immersive user experiences. Pragmatic practitioner who leverages AI to accelerate technical research, prototyping, and debugging while taking rigorous ownership of code quality, architecture, and systems reliability. Experienced in reverse-engineering commercial platforms (Amazon, YouTube, Zomato Hyperpure) to master DOM layout geometry and state flows from first principles. Author of 32 public repositories with verified production deployments across Vercel, Netlify, and GitHub.

TECHNICAL SKILLS MATRIX

CORE COMPETENCIES

Languages & Core	TypeScript (Strict Mode), JavaScript (ES6+, Async, DOM APIs), Python, HTML5 (Semantic & Accessible), CSS3 (Modern Grid / Flexbox)
Frontend & Creative	React 19, Vite, Next.js, Tailwind CSS, Bootstrap 5, GSAP (ScrollTrigger & Motion Physics), Spline 3D Integration, Web Audio API
AI & Intelligent Systems	Autonomous Coding Agents, LLM APIs (OpenAI / Claude / Gemini), Model Evaluation, Bounded AST Diffing, Meta WhatsApp Cloud API Webhooks, Email Marketing Automations (EMA)
Backend, Data & Tooling	Node.js, Fastify 4.x, Express, IndexedDB (Offline Persistence), Redis, PostgreSQL / Prisma, RESTful APIs, SSE, Electron 28 Desktop Tooling, Git & CI/CD

FEATURED SOFTWARE ENGINEERING PROJECTS

VERIFIED SYSTEMS

SimpleIDE — Desktop AI Code Editor & Autonomous Agent

github.com/lucky4-git1/SimpleIDE • 161 Passing Tests

Electron 28 • React 18 • Vite • Node.js IPC • AST Diff Engine • safeStorage

- Engineered an open-source desktop code editor embedding an autonomous coding agent (“Prime AI”) backed by 161 automated unit tests.
- Architected secure contextBridge IPC boundaries between the React renderer and Node.js OS layer, eliminating arbitrary execution vulnerabilities.
- Implemented unified AST diff inspection and syntax lint verification to enforce human confirmation before committing multi-step code mutations to disk.

RewriteBot — Production AI Paraphrasing & Writing Suite

rewritebot-client.vercel.app • Live Vercel SaaS

TypeScript • Fastify 4.x • React 18 • Redis • Server-Sent Events (SSE) • Prisma

- Architected and deployed a self-hostable, privacy-first AI rewriting platform on Vercel with zero third-party tracking or subscription paywalls.
- Built a high-throughput Fastify backend streaming transformed text via SSE with sub-50ms lexical tokenization latency and Redis queue buffering.
- Implemented Flesch-Kincaid readability scoring and word-level Levenshtein similarity diffing to audit originality and prevent content duplication.

Meta WhatsApp AI Automation & EMA Campaign Pipeline

github.com/lucky4-git1/whatsapp-ai-automation • Meta Cloud API

TypeScript • Node.js • Webhooks • HMAC-SHA256 • PostgreSQL • Cron Workers

- Developed enterprise customer messaging automation interfacing with the official Meta WhatsApp Business Cloud API with cryptographic HMAC-SHA256 verification.
- Engineered multilingual intent classification (English, Telugu, Hindi) and PostgreSQL CRM lead synchronization with automated failover to human agents.
- Built a companion email marketing campaign worker (EMA) featuring cron scheduling, dynamic template injection, and DNS deliverability auditing (SPF, DKIM).

MuTube — Zero-Server Offline Media Vault & Player

Live Demo • github.com/lucky4-git1/MuTube-media-player-v1.0

JavaScript ES6+ • HTML5 Media API • IndexedDB API • Client-Side Architecture

- Engineered a client-side media player providing completely offline MP3/MP4 playback with zero external server dependencies.
- Implemented persistent client storage using browser-native IndexedDB for audio files, custom playlists, equalizer settings, and user preferences.

Atherone 3D Web-App & High-Density UI Architecture Studies

Netlify Live • 5+ Production Clones • github.com/lucky4-git1

React • GSAP ScrollTrigger • Spline 3D • Semantic HTML5 • CSS Grid & Flexbox

- **Atherone 3D:** Integrated Spline 3D viewport canvas into React, binding camera trajectories to GSAP ScrollTrigger for scrollytelling physics.
- **Architecture Clones (Amazon, YouTube, Hyperpure, Blinkit, District):** Reverse-engineered high-density commercial layouts without component libraries to master complex layout math, collapsible navigation hierarchies, and responsive state flows from first principles.

EDUCATION & ACADEMIC CREDENTIALS

ACADEMIC BACKGROUND

Master of Computer Applications (MCA)
First Year Student • Hyderabad, India
2025 – 2027 (In Progress)
Focus: Distributed Software Architectures, AI Agent Workflows & Full-Stack Systems

Bachelor of Computer Applications (BCA)
Graduated with High Honors • Hyderabad, India
2022 – 2025
Foundations: Algorithms, Data Structures, Asynchronous JavaScript & Database Design
